

Nyx 330 - pole top luminaire

Design: Vilhelm Lauritzen Architects

NYX is a series of external luminaires for wall or column mounting. Nyx is the answer to today's demands for pleasant and well-defined light in urban areas.

Nyx 330 is available for post-top and wall mounting. Like the rest of the Nyx series, it comes in black, corten brown, and two grey colours suitable for galvanised standard columns. Made of cast silumin with frosted or opal-white polycarbonate shades, the luminaires are simple and safe and do not invite to vandalism.

The NYX luminaires are available with LED, and the shade edge being visible, it offers optical guidance.

NYX 330 is suitable for mounting on columns from three to six meters. The single luminaire can be used on any type of column with a top diameter of 60 mm. Adapter for 48 and 42 mm posts available. Nyx 330 is also available for mid-post mounting of more luminaires on a Ø60 mm cylinder.

Two or more luminaires can be mounted on each column. Luminaires two-by-two will be the solution for low columns - images can be found at www.focus-lighting.dk.

The Nyx 330 luminaire can be mounted on a double arm, available in two sizes: 800 or 1600 mm. The standard version is in hot-dipped galvanised steel and can be powder coated in the same colours as the luminaires.
